

threshold for repairing a destroyed city.

- Use 2000 as the repair threshold, as indicated by the README.
- Return the integer 2000.
- Keep the existing Game.update() repair logic unchanged.
- Do NOT modify nearest_battery().
- Do NOT modify explosion_color().
- Do NOT modify on_city_destroyed().
- Do NOT add unrelated features.
- Do NOT modify the README.

After making the change:

1. Show me exactly what you changed.
2. Explain how the existing Game.update() logic uses this threshold to repair a destroyed city.

Worked for 39s >

Implemented Task 4 by changing only `city_repair_threshold()` 's return value:

</> Diff

```
def city_repair_threshold():  
    """Return a score value at which a destroyed city is rebuilt, or None to disable  
-    pass  
+    return 2000
```

In `Game.update()`, the existing logic compares the score's 2000-point threshold count with `repairs_awarded`. When a new threshold is crossed, it updates that count and restores the first destroyed city, if one exists.

Tasks 1–3 remain intact. The diff shows only `game.py` modified; the other changes visible there are those earlier tasks. No unrelated files were modified.

Edited game.py
